P. 1 / 2

1. TABLE: Haplogroup N SNPM231 from the Fylogenetic tree constructed Mougley 1212 haplotypes. This is table (pages 2-3), Finnic Varangian Rurik-cluster, branch YBP times 2129 >1881> 1873, a report is drawn up Seppo Liukko 01/11/2013 (and google translation)

Proto Rurik - Liukko YBP1873 > Rurikids-cluster YBP 1034 hypothesis for review.

It should be noted broader Mougley Table 1212haplotypes, shows that the following Rurikids (*red*) and the Closest Cousin list starts with the Proto Rurik Liukko name, which can be found in this YBP 1034 years earlier table (surce:Mougley phylogeny.tree).

In Table 1, YBP 1873 Proto Rurik Liukko kit is **236032**, which is the ancestor of the following Proto Ruriks; Karlsson Werme kit 223073 and 221073 Mukovnikov kit. These Proto Rurikien followed in chronological order below array2- 1034, Indicating Rurikids and Rurik Closest Cousin group names (*marked in red are Rurikids*).

Table 1, at the beginning of the names are the Proto Rurikit; Liukko-Karlsson-Mukovnikov posterity father line of Rurik close cousins: Åkerman, Bxxx? , Peterson and Davenport-Stuart. Of this group, followed by the bottom of the Finno-based Rurik and the names of the rulers of Gedimins (Table 2 –only Rurikids). Ruriks genus common ancestor Proto Rurik is born (*or, mutations L550 +*) has been calculated that **about 2200 years ago** (200 years BC.). Time estimate is A. Bajor (*FT-Rurik Dynasty*)

YBP 2233>2129>1881>(Proto -Rurik LIUKKO > RURIKIDS) continue...

2. NEW RURIKIDS TABLE Mougley Re: Rurik N1C-L550

« # 805: Helmikuu 18, 2013, 07:53:16 [Quote: Mukovnikov 17. helmikuuta 2013.](#)
[Cluster: http://mougley-gen.livejournal.com/2944.html](http://mougley-gen.livejournal.com/2944.html)

(Table 2-down)

This YBP 1034 (below), Table interesting is the fact that Hensriksson / Larsson name table is certainly Finland migration to Sweden . This prototype Rurikin offspring did not have Sweden

N-group mutation table YBP 1873 - 1034 branches Finnic-Varangian-Source. Ex.Proto Rurik+Rurikids from
 Fylogenetic tree 1212 haplotypes, Mougley 06/12/2012 :

Table I and II model developed 30.03.2013 Seppo Liukko FIN (en. Google translation)

P. 2 / 2

Ruriks ancestor calculated during birth of about 2200 YBP, but has become Sweden from Finland (*Finnish forest during migration*), or until about the 1600s.Finnforest men (yDNA Rurik N-group haplotypes) are moved from Finland to Sweden about the 1600s (*Ex. Werme is Värmland mining time-century Finnish AD 1200-1400*).

Such a Finnish Rurik close cousin ancestor have been proven mm. Henrikson Larsson kit 193008. Finland, which has changed and is at the same table also Mougley ancestor Östlund kit 187619 and kit 139986 also Dion Rurik close cousins persons (*see Table Mougley -1034, these pre-father line is coming from the Finnic regions or Finland*). Their father line jet Henriksson / Larsson (YBP) is Mougley table marked 209 years.

This table also shows that there is Massalski mm. Rusun kit 170255 (*Note: Proto Rurik Liukko GD is the 3.closest Rusu*) and Korsström kit N50634 ancestor. Also in these YBP-age difference Rusu has 209 years, the same family branch is also **Kropotkin, Sakhovskoy and Rzhevsky** that are Rurikids (prince.).

NOTE: For each of these Mougley 1034 Table 2, and Rurikids Rurik CloseCousins example leaving father line YBP1873- Liukko Prototype 1034 -Rurik-line .
